

Regarding Lombok library

Why -

To reduce boilerplate code from the entities Layer , add Lombok annotations

Good Ref : <https://www.baeldung.com/intro-to-project-lombok>

What is Lombok ?

It's helper 3rd party library , to reduce boilerplate code from java classes(mainly form POJO layer) , using annotations

Steps

1. Add lombok dependency, during creation of spring boot project.

2. Install Lombok library , to IDE location.

3. Use class level annotations

eg : @NoArgsConstructor , @AllArgsConstructor, @RequiredArgsConstructor

@Getter

@Setter

@ToString(exclude = ...,callSuper = true)

@Data n many more

Steps

1. Add lombok dependency : pom.xml (already done !)

2. install lombok jar , from

<home dir> \.m2\repository\org\projectlombok\lombok\1.18.30

OR open terminal/cmd prompt

java -jar lombok-1.18.30.jar

Specify location : IDE (STS : IDE app)

2.5 Maven force update + cleaning steps

3. use annotations.

To Locate IDE installation :

From STS IDE --Help --Installation Details -- Configuration

eg : C:\sts-bundle\sts-3.9.18.RELEASE\STS.exe

n Install Lombok JAR.
