

1. Revise Spring Boot MVC with Data JPa with code walk through.
update blog post , delete blog post , create blog post

2. Add Lombok annotations n install Lombok library with STS IDE
For testing add only to BaseEntity n Category.
Test spring boot app again

To get blog post from it's id.

In case of invalid id , raise custome exc - ResourceNotFoundExc

Method of Optional class -

```
public <X extends Throwable> T orElseThrow (Supplier<? extends X> exceptionSupplier) throws X  
extends Throwable
```

If a value is present, returns the value, otherwise throws an exception produced by the exception
supplying function.

```
BlogPost post=blogPOstDao.findById(postId).orElseThrow(() -> new ResourceNotFoundExc("invalid post  
id !!!"));
```
