

Standard design practice for back end : DO NOT directly send response body content , instead wrap it in ResponseEntity object, which represents ENTIRE HTTP response(status code,header/s, body)

1.1 Introduction to ResponseEntity

o.s.http.ResponseEntity<T> : a generic class

T : type of the response body

1.2 o.s.http.ResponseEntity<T>

Ctor : ResponseEntity(T body, HttpStatus status);

HttpStatus : enum containing Resp status codes

OR Methods

ResponseEntity.status(HttpStatus status).body(T body)
