PROFESSIONAL SUMMARY

Software Engineer with 2.8 years of experience in enterprise AI engineering and backend development. Experienced in building and deploying Generative AI applications involving RAG, LLM orchestration, MCP tooling, workflow automation and full-stack SaaS products. Skilled in Python, Next.js, REST APIs, AWS, ETL pipelines, CI/CD, and production AI systems.

WORK EXPERIENCE

Software Engineer | CitiusTech Healthcare Technology Pvt. Ltd.

Sept 2024 - Present

Enterprise AI Assistant Platform

- Built a multi-agent AI system with MCP-based tool calling - given a production bug Jira ticket, the agent queries logs, inspects source code, and raises PRs or Jira comments autonomously; a session-aware KB routing layer grounds every response before any tool executes.
- Built semantic search and knowledge routing to perform cosine similarity search on a local embedding index to retrieve relevant knowledge cards, grounds LLM responses before any external tool calls; enforced role-based guardrails with fail-closed policy per tool execution.
- Built an eval framework using LLM-as-judge scoring retrieval and generation quality across ~200 tickets and Slack queries, measuring precision and recall for semantic search and assessing LLM response relevance, grounding, and hallucination to validate production readiness.

Error Automation & ETL Pipeline

- Built a production error monitoring system that ingests daily error logs, classifies them, and automatically creates structured Jira tickets with Slack alerts - replacing a fully manual triage process.
- Automated end-to-end error monitoring and Jira ticketing workflows, reducing 8 hours of daily manual effort and automating 180+ daily ticket creations previously handled manually.

Junior Developer | Hudl India Pvt. Ltd.

June 2019 – Feb 2020

- Built and maintained Python-based backend features and data processing utilities.
- Participated in code reviews, bug fixing, and unit testing to ensure code quality and stability.

Projects

[Vidyatract SaaS](#) | Fast API · Next.js · PostgreSQL · AWS

- Built and deployed a multi-tenant institute management SaaS covering fee management, attendance, test scores, admissions, and a parent-facing QR portal - actively used by 3 institutes with 1000+ students.
- Implemented tenant-level data isolation using JWT-based RBAC and scoped database queries, ensuring complete separation of institute data across all API endpoints.

SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript

AI/GenAI: LLMs, RAG, MCP, LangChain, Embedding Models, Vector Databases, CrewAI

Backend: Fast API, Flask, Spring Boot, ETL Pipelines, Workflow Automation, Redis, Pytest

Cloud/Devops: AWS (S3, RDS, EKS), Docker, Kubernetes, GitHub Actions, ArgoCD

Databases: PostgreSQL, MySQL, MongoDB

Frontend: Reactjs, Next.js

EDUCATION

Post Graduate Diploma in Advanced Computing, CDAC | 2024

Bachelor of Engineering, SPPU | 2016 – 2019
