PROFESSIONAL SUMMARY

Data Engineer with 2.6 years of experience building and maintaining scalable ETL/ELT pipelines for batch and streaming workloads using Apache Spark, Python, and SQL. Skilled in data modeling, workflow orchestration, and deploying production-grade solutions in containerized environments via CI/CD. Experienced in integrating AI/ML capabilities into data infrastructure to support analytics and intelligent data-driven systems.

WORK EXPERIENCE

Software Engineer | CitiusTech Healthcare Technology Pvt. Ltd.
Healthcare Data Platform – ETL Pipeline

Sept 2024 - Present

- Managed multi-client data ingestion workflows handling batch and streaming data across AWS S3-based data lake layer, supporting large-scale healthcare datasets in a medallion architecture.
- Configured AWS Glue crawlers for data cataloguing over S3 layers, enabling Athena-based querying for data validation and pipeline monitoring.
- Developed and maintained spark transformation jobs for claims, clinical, and HL7 data types, with the silver layer serving as the curated data source for central data warehouse.
- Developed Apache NiFi ingestion pipelines to pull raw healthcare data from S3, performing normalization and decryption to load processed data into the extract and origin layers.
- Resolved production bugs across ingestion and transformation pipelines and independently built end-to-end connector pipelines from scratch for new client onboardings, covering raw ingestion through to the transformation layer.

Error Automation & ETL Pipeline

- Developed automation system for centralized error processing using Flask, Jira, relational databases, AWS S3 and orchestrated as a scheduled daily workflow using Apache Airflow.
- Built ETL pipelines to extract, process, and transform production error logs into structured workflows for automated Jira ticket generation and Slack-based notification.
- Developed unit/integration tests and integrated CI/CD workflows using GitHub Actions.
- Automated end-to-end error monitoring and Jira ticketing workflows, reducing 8 hours of daily manual effort and automating 180+ daily ticket creations previously handled manually.

Junior Developer | Hudl India Pvt. Ltd.

June 2019 – Feb 2020

- Developed Python based data processing scripts and maintained analytical dashboards for sports performance data, leveraging Apache Spark for large-scale dataset analysis.
- Collaborated with senior engineers on feature development, code reviews, and unit testing to ensure pipeline reliability and data quality.

SKILLS

Languages: SQL, Python, Java, Scala

Big Data Processing: Apache Spark, ETL/ELT, Batch & Streaming Pipelines, Data Modeling

Cloud & Databases: AWS (S3, Glue, Athena, Redshift), PostgreSQL, MySQL

Orchestration: ArgoCD, Argo Workflows, Apache Airflow

DevOps: Docker, Kubernetes, GitHub Actions, CI/CD

Visualization & Analytics: Amazon QuickSight, Power BI

EDUCATION

Post Graduate Diploma in Advanced Computing, CDAC | 2024

Bachelor of Engineering, SPPU | 2016 – 2019
