PROFESSIONAL SUMMARY

Software Engineer with 2.6 years of experience in enterprise AI engineering and backend development. Experienced in building and deploying Generative AI applications involving Retrieval-Augmented Generation (RAG), LLM orchestration, MCP tooling, vector retrieval, and workflow automation. Skilled in Python, FastAPI, REST APIs, AWS, ETL pipelines, CI/CD, and production AI systems.

WORK EXPERIENCE

Software Engineer | CitiusTech Healthcare Technology Pvt. Ltd.

Sept 2024 - Present

Enterprise AI Assistant Platform

- Developed a semantic search MCP tool and retrieval pipelines using FastMCP and FastEmbed (MiniLM), with an embedding index builder and hot-reload on knowledge base changes.
- Developed role-based AI guardrail systems with environment-aware access controls, per-tier read/write restrictions.
- Built a knowledge routing pipeline using a custom MCP tool that performs cosine similarity search on a local embedding index to retrieve relevant knowledge cards, grounding LLM responses before any external tool calls.
- Built an MCP-server to expose Jira, AWS, Git, Kubernetes as callable tools, enabling the AI agent to perform end-to-end healthcare data operations autonomously.
- Evaluated retrieval and generation quality across ~200 tickets and Slack queries, measuring precision and recall for semantic search and assessing LLM response relevance, grounding, and hallucination to validate production readiness.

Error Automation & ETL Pipeline

- Developed and deployed automation system for centralized error processing using Flask, Jira, Slack, relational databases, AWS S3, and Argo Workflows as a scheduled daily pipeline.
- Built ETL pipelines to extract, process, and transform production error logs into structured workflows for automated Jira ticket generation and Slack-based notification.
- Developed unit/integration tests and integrated CI/CD workflows using GitHub Actions.
- Automated end-to-end error monitoring and Jira ticketing workflows, reducing 8 hours of daily manual effort and automating 180+ daily ticket creations previously handled manually.

Junior Developer | Hudl India Pvt. Ltd.

June 2019 – Feb 2020

- Built and maintained Python-based backend features and data processing utilities in collaboration with senior engineers
- Participated in code reviews, bug fixing, and unit testing to ensure code quality and stability.

SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript

AI/GenAI: LLMs, RAG, Semantic Retrieval, MCP, FastMCP, LiteLLM, LangChain, Embedding Models, Vector Databases

Backend: FastAPI, Flask, Spring Boot, ETL Pipelines, Workflow Automation, Redis, Pytest

Cloud/Devops: AWS (S3, RDS, EKS), Docker, Kubernetes, GitHub Actions, ArgoCD

Databases: PostgreSQL, MySQL, MongoDB

Frontend: ReactJS, NextJS

EDUCATION

Post Graduate Diploma in Advanced Computing, CDAC | 2024

Bachelor of Engineering, SPPU | 2016 – 2019
